

FIVE WAYS LTI ADVANTAGE

ENABLES BETTER USER EXPERIENCES AT THE *SPEED OF NOW*

Faculty, IT leaders, curriculum/instructional designers, and learners all have a stake in digital transformation. When educators can adopt innovative technology that supports their curriculum and student learning needs, and those edtech products work together seamlessly, they can implement new instructional strategies that will have a more significant impact on learning and student success.

LTI Advantage—a revolutionary approach for integrating IMS Certified learning tools, apps, and content—enables unparalleled flexibility and choice in educational software to support new learning models and rigorous institutional requirements. LTI Advantage provides institutions with a core integration strategy for enabling digital transformation and ensuring its learning ecosystem is secure, works with the leading learning management systems and tool providers, and is data analytics ready.

1 PREPARES YOUR INSTITUTION TO BE DIGITAL-READY ON DAY ONE OF LEARNING

Ensures that every product connects in the same way—eliminating the need for IT to undergo costly and time-consuming custom integrations and providing students with better experiences from their digital learning technology that can lead to increased academic success.

2 PRESENTS STUDENTS AND FACULTY WITH A CLEARER PICTURE OF LEARNING

At the *speed of now*, faculty can seamlessly sync grades and comments— e.g., notes and evidence of a student's activity on an assignment—across all LTI Advantage certified third-party learning tools with the master LMS gradebook.

3 ESTABLISHES TRUST THAT DATA PASSING BETWEEN APPLICATIONS IS SECURE

Gives institutional leaders and end users peace of mind that the bi-directional exchange of assessment results between the LMS and LTI Advantage certified applications uses the latest security protocols.

4 HELPS FACULTY RECLAIM HOURS OF INSTRUCTIONAL TIME

Automates course enrollment into a third-party tool (no more manual entry of student names!) and group management, and allows faculty to report student activity directly back to the LMS gradebook without having to merge separate reports giving them more time to spend with students.

5 FASTER AND MORE EFFICIENT COURSE BUILDING

Educators and curriculum/instructional designers can employ better pedagogical methods with deep integration of specific learning objects, content, and playlists into a learning module, so students can access relevant course content without having to click on or search through multiple resources.

Under the leadership of IMS Global Learning Consortium's 500+ members (and growing), LTI Advantage is being adopted rapidly as the preferred method of learning product integration. IMS certification of all products is needed to ensure the above benefits—and others—are achieved, and institutional requirements are met.
